## \$75 Vascular Screening Special (\$99 value\*)

- Abdominal aortic aneurysm (abdomen)
- Carotid artery disease (neck)
- Peripheral artery disease (legs)

During vascular screening critical blood vessels in your neck area, your abdomen and your legs are checked for signs of restriction or weakness using vascular ultrasound. If these problems are detected early, they can be treated before they become life-threatening, such as a stroke. This painless, non-invasive and inexpensive screening could save your life.
